

Google Workspace | Business Continuity

Similar to global regulatory bodies, the Canadian Office of the Superintendent of Financial Institutions (OSFI) is revising its [B-10 Guidelines](#) to explicitly require organizations to develop a robust business continuity plan by examining technology concentration risks.

Business Implications

- Identify and assess technology concentration risks
- Design a diversified technology environment to enable business continuity
- Deliver an environment that fosters collaboration, connectivity and productivity

Technology Implications

- Technologies leverage contextual signals to take defense to the user
- Technologies enable company resources to continue operations during service outages
- Solutions address dynamic nature of employee experiences

Google Workspace is a suite of productivity tools designed for real-time collaboration. In the event of an outage to your primary technology vendor, Google Workspace allows critical business operations to continue.

Secure by Design

Google Workspace runs on Google's Zero Trust security approach

- Granular contextual-based signals means no VPN required
- Cloud-first, browser-based means no data stored on devices
- Proactive protection against security threats with no additional add-ons

Flexible Recovery Packages

Wide range of solutions for different teams, even within an organization

- Lean: Workspace + emergency accounts
- Moderate: hot/cold standby rollout readiness + directory sync
- Full: dual mail delivery, file sync and SSO

Integrates seamlessly

Google Workspace is compatible with your existing solutions

- Integrates with Active Directory and 3rd party identity providers
- Select data is replicated at predefined intervals, ready for use
- Change management strategies and training is complimentary
