

Protect your organization with Google's premium standalone security solution

Leverage a modern, proactive zero trust security framework with three core principles:

Eliminate privileged networks (no VPNs)

Authorize based on contextual policies

Enforce continuous verification

How it works:

Browser-based front end enables simple, secure access

Endpoint verification pushed to user's devices

Managed company profile enforces granular policies

User requests require extensive contextual signals to authorize

How it protects your organization:

Zero Trust Control
Context-aware access for SaaS applications

DLP
Detect+prevent sensitive data loss via transfers

Prevent Malware
Cloud sandboxing prevents malware/ ransomware

Acceptable use
Prevent access to unacceptable/unauthorized sites

Visibility
Detailed reporting and analysis of unsafe activities

Prevent Phishing
Prevent malicious/phishing site visits in real-time
